

练习二力学基本定律（二）

1. $\frac{m^2 g^2}{2k}$

2. $1\vec{i} + \frac{3}{4}\vec{j}; 1\vec{i} + \frac{2}{3}\vec{j}$

3. (4)

4. (1)

5. (1) $W_f = \Delta E_k = \frac{1}{2}m\left(\frac{v_0}{2}\right)^2 - \frac{1}{2}mv_0^2 = -\frac{3}{8}mv_0^2$

(2) $W_f = -\mu mg \cdot 2\pi r \quad \therefore \mu = \frac{3v_0^2}{16\pi rg}$

(3) $N = (0 - \frac{1}{2}mv_0^2) / \Delta E_k = \frac{4}{3}$ (圈)

6. 设人抛球后的速度为 $\vec{V}$ ，则人球系统抛球过程水平方向动量守恒

$$\therefore (M+m)v_0 = MV + m(u+V) \quad V = v_0 - \frac{mu}{M+m}$$

人对球施加的冲量

$$I = m(u+V) - mv_0 = \frac{mMu}{M+m} \quad \text{方向水平向前}$$
